**LATIN RESOURCES EYES MAIDEN LITHIUM RESOURCE BY
END SEPTEMBER FOR NEW ARGENTINIAN ACQUISITION**

The Perth company owning the largest lithium hard rock holdings in Argentina says it expects to announce by next quarter, a maiden lithium resource for its lead project.

Addressing the opening day today of the sixth *Paydirt Latin America Downunder* conference in Perth, Latin Resources' Managing Director, Mr Chris Gale, said exploration and development of lithium resources in Argentina – part of the world renowned “Lithium Triangle” including Chile and Bolivia – had overwhelmingly focused on salt lakes.

This presented an “under the radar” opportunity for hard rock lithium discoveries in Argentina, with the bonus of accessory minerals.

Latin Resources has assembled more than 100,000 hectares of prospective lithium bearing pegmatite holdings across Argentina, much of it in the country's northwest.

San Luis is one of two key districts targeted for acquisition by Latin America – the other being Catamarca- as both have documented lithium pegmatite occurrences. Some of the deposits in the target areas have been mined historically.

The geology in the areas also bears strong resemblance to Western Australia's renowned pegmatite footprints.

Mr Gale told delegates field work is underway on the newly acquired San Luis concessions to define immediate drill targets with first drilling scheduled for later this quarter.

“Our intention is to drill and define a JORC classified maiden lithium resource by the end of September this year,” Mr Gale said.

“We will then commence design work and initial prefeasibility studies on a spodumene concentrate plant once the maiden JORC resource is completed.”
